

ASCHI'S WORKSHOP

EASY DOES IT!

Building wonderful wooden toys from our many plans is child's play!

Important information to select the right plan for you

Aschi's Workshop has created toys and model plans in three different scales and styles to cater to the experienced and to the occasional builder, to toymakers and serious model builders alike. The graph shows the difference in sizes.

Tuff Truck Series

Tuff Truck series consists of our big and tuff creation for the bigger boys and girls who enjoy giving their toys a tuff work out, in or outdoors. Constructed from mainly $\frac{3}{4}$ " (19mm) lumber/wood these toys can handle a bit of ruff and tuff treatment. The Tuff Truck Series are still made to scale (1:20 scale), but do not go into as much detail as the Scale Model series. Semi Trailers and trailers must be from the same model series to be interchangeable.

Scale Model Series

The Scale 1:27 Series is the most popular with the toy/model makers and woodworkers. Attention to details is the hallmark of this series. The ideal projects for desktop display, showcase and conversation pieces. This Scale Model series is a nice handy size to work with and as popular with children as with adults. Children will appreciate the care that has gone into making these toys by that special person in their lives. The trucks and trailer from the Scale Model Series do not match up with Tuff or Junior Series.

Junior Series

The Junior Series – as the name says – is aimed for the younger children. It is also more suitable for the inexperienced woodworker and excellent for teaching a child the fundamentals of woodworking. The plans in the Junior Series are made for quick results. They are very sturdy for the sometimes ruff little hands. Ideal to play in the house or on the carpet with roads and buildings printed on. The smaller Junior series makes it possible to build long trains without running into storage problems. Because of the smaller size it does not take endless hours to build up a good collection. The Junior series can be built up to a big play set over time. Not only trains and trucks – *Aschi's workshop* will offer even more play value with plans for buildings, trees and animals.
